
Reindl Coated Films at PACK EXPO International

How Reindl Coated Films should spend its time at PACK EXPO International, based on a screening of all 2,676 evaluated exhibitors.

October 18, 2026 to October 21, 2026
Chicago, Illinois, United States

The Access Arbitrage™ framework allocates time to the people who are otherwise hard to reach and matter most to Reindl Coated Films

Premise

A company needs strong Fit and Impact to merit time. Access completes the score when the client team can assess it.

Dimensions

The Access Arbitrage™ Score is the average of Fit and Impact, plus Access when Reindl Coated Films has scored it. Companies without an Access score are ranked on Fit and Impact alone.

Fit.

How closely the company matches what Reindl Coated Films sells and to whom. A converter buying barrier film scores high; a rigid-container maker scores low. Scored by HallBrief.

Impact.

What the relationship would be worth if it went well: plants, lines, volume, and whether something is happening now. Scored by HallBrief.

Access.

How much more reachable the show makes the person who decides on film, from 0 if reachable any week to 100 if only here. Scored by Reindl Coated Films from its own experience.

The show rewards teams that arrive with their meetings already booked

Problem

Most teams arrive without meetings booked and spend the show walking the floor.

The floor does not reward that. Attendees stop at only 26 to 31 exhibits in a show, and more than half of those stops are decided before arrival, from the exhibitor directory and the session list.^{1, 2} A team that has not planned is left with the stops nobody planned: conversations with whoever is at the front of a booth, a stack of cards and pens, and hours in the aisles.

The difference is measurable. Teams that set goals before arriving report 25 to 30 percent better outcomes, and pre-show outreach produces 46 percent more visits than walk-up traffic alone.³ Most of the show's value goes to teams whose meetings are on the calendar before the doors open.

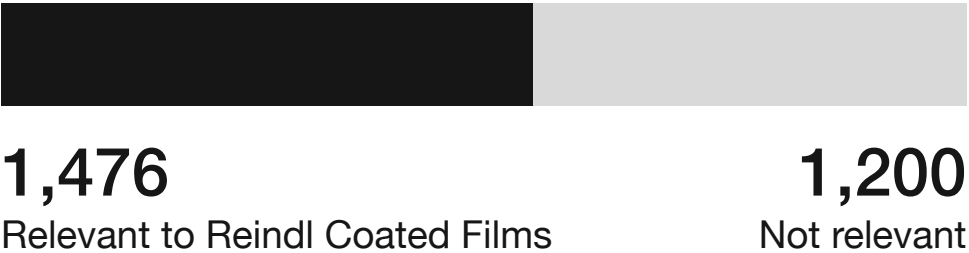

Playbook

○ Six weeks out	Score access for each company, total, and sort. Work from the top down.
○ Five weeks out	Assign each company to one owner, who handles the request, the meeting, and the follow-up.
○ Four weeks out	Reach out to each company, starting at the top of the list, and ask for a meeting at the show.
○ Two weeks out	Confirm accepted meetings. For the rest, set a booth visit time. Continue down the list as far as time allows.
● During the show	Build your day around your set meetings. Visit targeted booths according to your planning schedule. Leave about a third of your time open for serendipitous interactions.
○ Within one week	Follow up every commitment in writing. Call the companies you were unable to reach at the show.

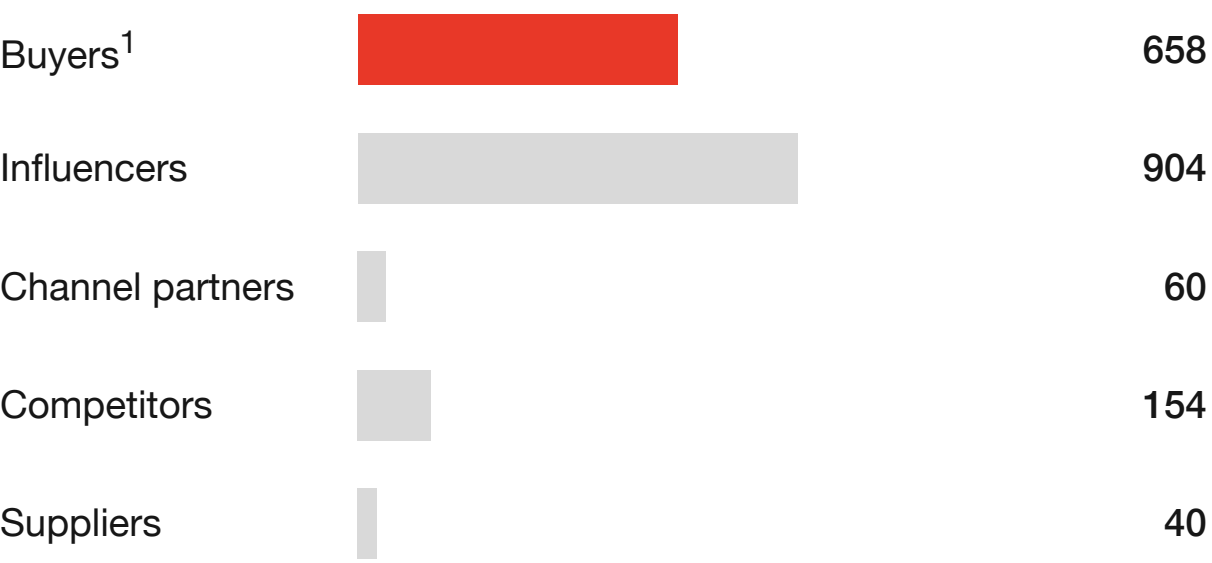

¹ Center for Exhibition Industry Research, attendee exhibit-stop research as reported in CEIR Industry Insight materials. ² CEIR, *Attracting Attendees*: 94% of attendees pre-plan; 56% search the exhibitor directory to choose booths. ³ CEIR, *ROI Playbook* series and pre-show marketing research.

Of 2,676 evaluated exhibitors, 1,476 are relevant to Reindl Coated Films and 658 could buy from it

PACK EXPO International 2026: existing film uses offer earlier sales; redesigns shape future demand

What will people talk about?

Buyers must weigh packaging waste fees and easier recycling against product protection. Expect PACK EXPO International conversations to center on changing materials without shortening shelf life, because those choices determine where Reindl's barrier films remain necessary as packs are redesigned.^{1,2}

Where should Reindl Coated Films focus?

Target established food-packaging uses

Ashwell-Tillman Packaging Group uses metallized films in food packaging.³ That can mean an earlier sale than a package redesign, but buyers need a reason to change suppliers. Focus on unmet requirements Reindl can address, rather than treating every existing film user as an opportunity.

Join selected packaging redesigns

Package redesigns can reopen supplier choice before materials are fixed. Early involvement could bring repeat film orders, but development can take longer than serving existing uses. Reserve time for redesigns where product protection still requires film, rather than pursuing every proposed material change.

What should Reindl Coated Films build next?

What to find out

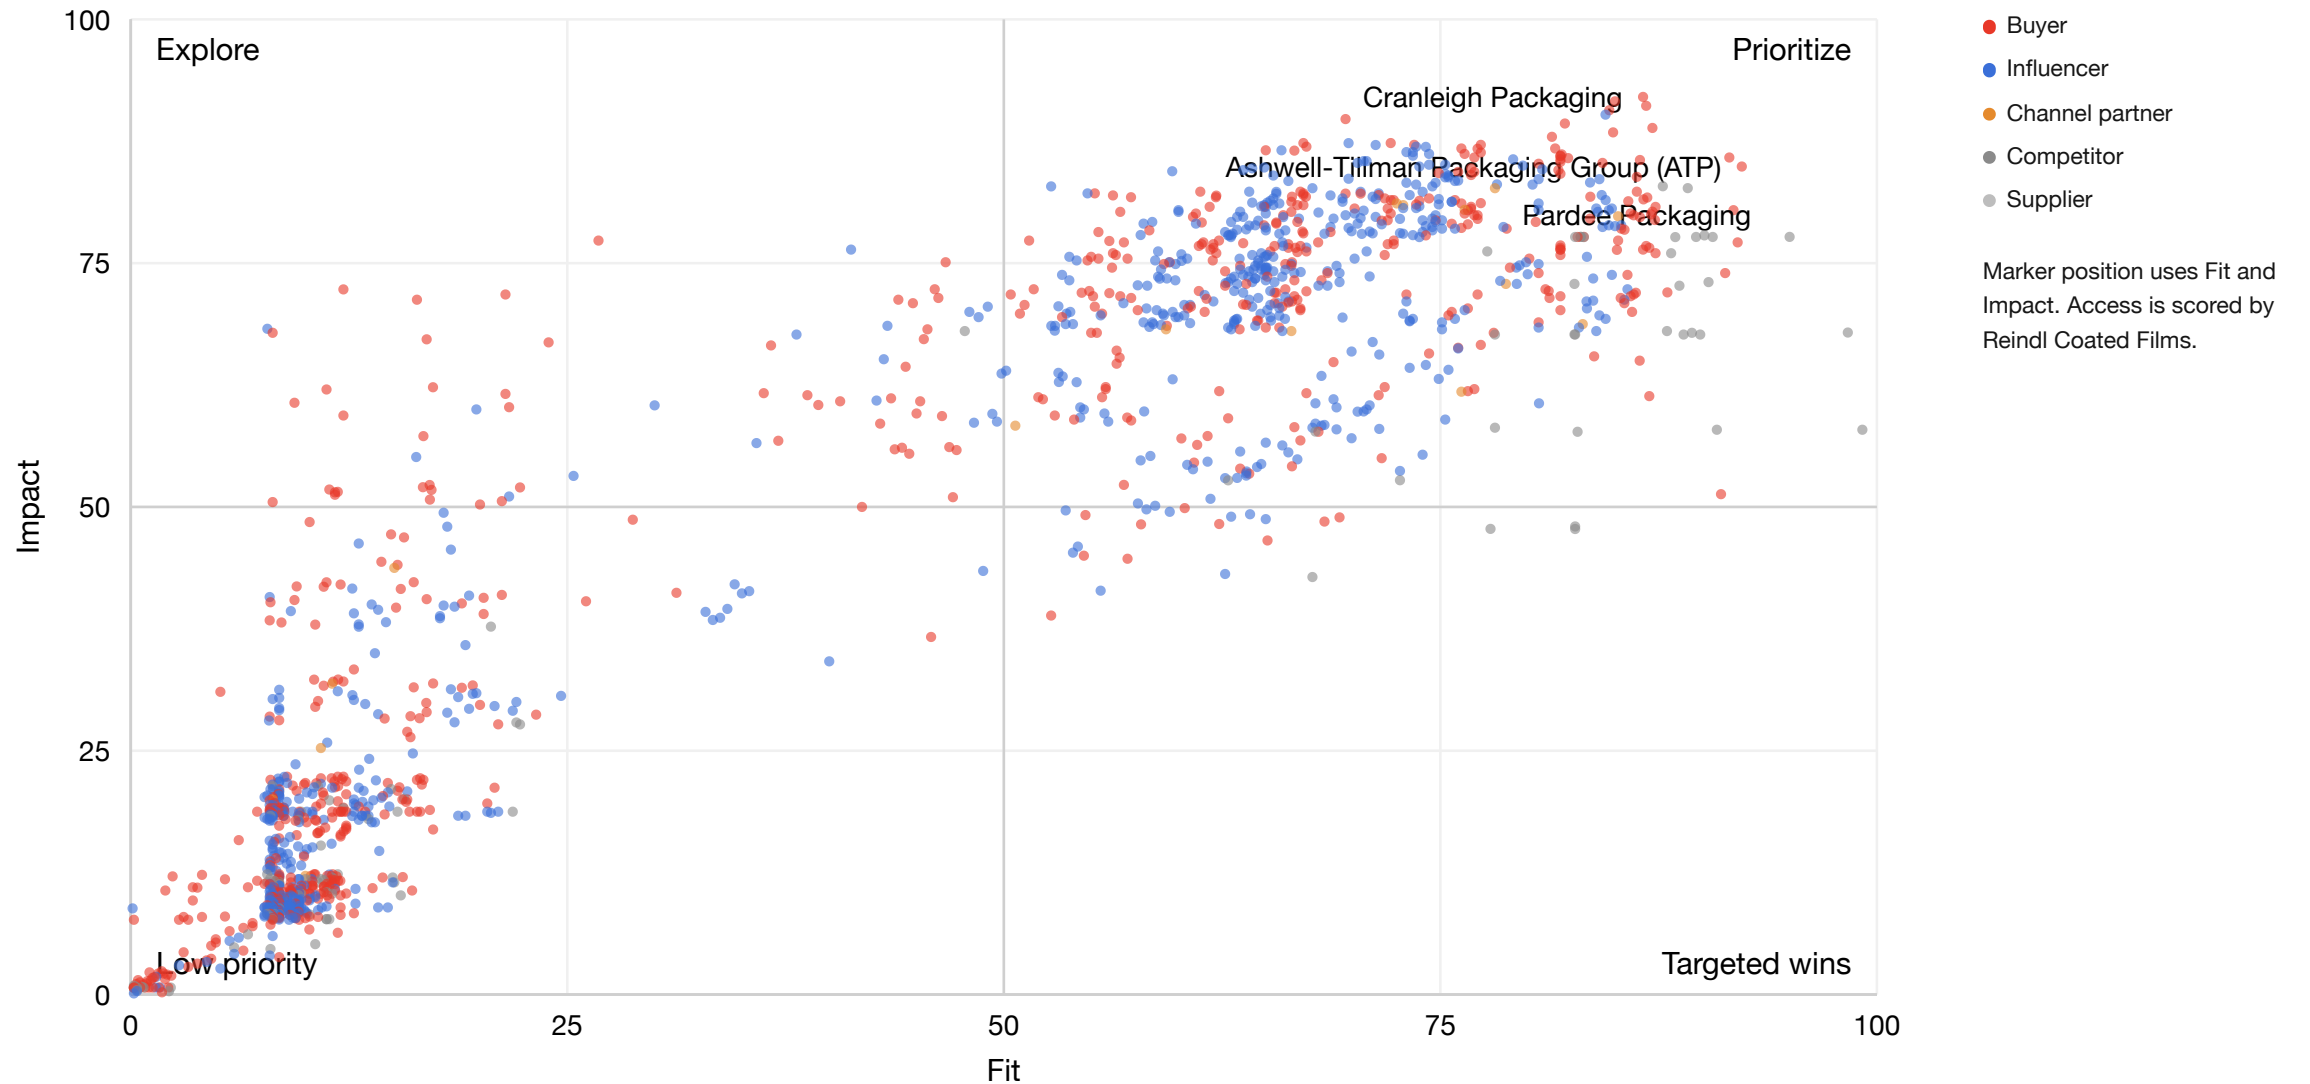

Ask customers, competitors and machinery suppliers which redesigned packs get repeat orders after trials, and which projects failed. Compare patterns across uses: did protection, machine reliability, cost or rejection by recyclers decide the outcome? Identify recurring needs for new films, better processing or partners.

What the answers could mean

If recurring film problems block repeat orders, invest in film development and machinery partnerships. If customers successfully replace film, choose between supplying replacements through partners and investing in markets that still need metallized films.

Cranleigh Packaging

Flexible and rigid packaging manufacturer
Global, Over 40 countries

Booth
S-4580

Makes flexible and rigid packaging for food, beverage, healthcare, and consumer products, including pouches, trays, and thermoformed blisters.

Cranleigh's flexible packaging production is a relevant application for Reindl's metallized films, particularly for barrier and high-hygiene packaging.

Open with What metallized film specifications and barrier levels do your flexible packaging lines require?

Who to look for¹

	Aaron Betts President, Cranleigh Flexibles Converter & Distribution	aaron.betts@cranleighpkg.com +16165550182
	Camille Fontaine Vice President Healthcare Flexibles, Global and EMEA	camille.fontaine@cranleighpkg.com
	Damien Roussel Product Development Director - HealthCare markets	damien.roussel@cranleighpkg.com
	Craig Donnelly Business Group President - Cranleigh Flexibles North America	craig.donnelly@cranleighpkg.com +16165550190

Fit

Cranleigh's flexible packaging operations align with Reindl's metallized film products for barrier and converting applications.

87

Impact

Cranleigh's global scale and extensive packaging production make it a significant potential buyer of metallized films.

92

Colquitt Flexibles

Flexible and specialty rigid packaging manufacturer

Booth
S-1962

Makes flexible packaging, specialty rigid packaging, and healthcare packaging with flexographic, rotogravure, and digital printing plus lamination.

Colquitt's extrusion and adhesive lamination of flexible films aligns with Reindl's metallized BOPET, BOPP, and other film offerings, making it a strong application discussion for barrier and metallized film needs.

Open with Which metallized film structures and barrier properties are you evaluating for your flexible packaging applications?

Who to look for¹

	Eleanor Whitfield CEO	+14145550186
	Adam Kirkland Account Manager	akirkland@colquittflex.com +16105550175
	Colin Ashby Product Development Engineer	cashby@colquittflex.com +16305550128
	Diego Salcedo Product Development Engineer I	dsalcedo@colquittflex.com +15135550167

Fit

Colquitt's flexible packaging converting operations, including lamination and printing, align with Reindl's metallized film product lines.

87

Impact

Colquitt operates 16 manufacturing plants and supports 150 brands, indicating substantial potential volume for metallized film suppliers.

Shree Gauri Cartons Pvt. Ltd.

Printed carton and packaging manufacturer
India

Booth
W-50652

Makes printed folding cartons and corrugated cartons for FMCG, cosmetics, and pharmaceutical packaging.

The exhibitor's GauriMet UV printed cartons use metallized PET film, a product Reindl supplies, making it a direct prospect for metallized film supply.

Open with Which metallized film grades and widths do you require for your GauriMet carton production?

Who to look for¹

Naveen Deshmukh
Operations Manager (Administrations, Production, Planning & Co-ordinator) with 25 years

Fit

The exhibitor's GauriMet UV printed cartons use metallized PET film, a direct match to Reindl's metallized film products.

92

Impact

With 2.5 million cartons converted per day and export markets, the exhibitor represents significant potential metallized film volume.

Ashwell-Tillman Packaging Group (ATP)

Flexible packaging converter

Booth
W-36288

Makes laminated films, pouches, and rollstock for food, pet food, and other consumer markets.

ATP's use of metallized PET and OPP in laminations makes it a direct prospect for Reindl's metallized films. Discussing their film specifications can identify supply opportunities.

Open with What metallized film specifications and volumes do you typically require for your laminated structures?

Who to look for¹

DK	Daniel Kessler Vice President of Sales	+15025550127
	Elias (Eli) Kantor Sales Representative	ekantor@ashwelltillman.com +14145550191
GA	Grant Ashcroft National Account Manager	gashcroft@ashwelltillman.com +16165550199
BI	Bruno Ibarra Packaging Engineer	bruno@ashwelltillman.com

Fit

ATP's laminations use metallized PET and OPP, directly matching Reindl's metallized film products.

92

Impact

ATP operates three plants and serves national brands, indicating significant potential volume for metallized film supply.

KARDELENPACK

Flexible packaging and agricultural film manufacturer

Booth
LU-7272

Produces flexible packaging, shrink and stretch films, pouches, bags, and agricultural films for food, hygiene, and industrial markets.

KARDELENPACK's flexible packaging and pouch production are the relevant formats for discussing metallized and barrier film requirements. Its food and hygiene packaging lines are a potential application for Reindl's metallized films.

Open with Which of your flexible packaging products require metallized or barrier films?

Who to look for¹

Fit

KARDELENPACK produces flexible packaging and pouches, which are common applications for metallized films, aligning with Reindl's product line.

85

Impact

KARDELENPACK's scale, with 2000 employees and broad product lines, makes it a high-impact potential buyer for metallized films.

Booth
W-47574

Makes flexible packaging films, pouches, and bags for food, beverage, and hygiene markets, including high-barrier and sustainable structures.

Jacuiplast's high-barrier film and lamination production is a relevant application for Reindl's metallized and clear barrier films; discussing their barrier specifications can clarify a potential supply fit.

Open with Which barrier film types are specified in your high-barrier packaging structures?

Who to look for¹

Fit

Jacuiplast's flexible packaging operations, including high-barrier films and tri-laminates, align with Reindl's metallized and barrier film products.

77

Impact

Jacuiplast's 10 plants and 4,000 employees indicate substantial converting capacity, making it a high-impact prospect for film supply.

Engadin Pac

Flexible packaging manufacturer

Booth
W-50662

Makes custom pouches, bags, and sustainable flexible packaging for coffee, pet food, and other consumer goods.

Its pouch and bag production is the relevant format for discussing metallized and barrier film requirements, given its focus on custom flexible packaging.

Open with Which film substrates and barrier properties are most critical for your pouch and bag applications?

Who to look for¹

Elsa R
Packaging Specialist

sales21@engadinpac.com
+19195550117

Fit

Engadin Pac's flexible packaging production aligns with Reindl's metallized and barrier film offerings, though no specific input film is named.

77

Impact

As a global manufacturer serving 10,000 clients across 60 countries, Engadin Pac represents significant potential volume for film supply.

Molded fiber packaging manufacturer
United States, India

Booth
W-50938

Makes molded fiber trays with high-barrier liners for meat, ready meals, produce, and custom applications.

Tervana's Alox lidding film aligns with Reindl's ReinClear clear barrier film, making it a direct prospect for barrier film supply.

Open with What specifications and volumes do you require for your Alox lidding film?

Who to look for¹

AC	Aman Chopra Co-founder & CEO	aman@tervanafiber.com +13125550181
NK	Nitin Kapoor Co-founder, Chief Business Officer	nitin@tervanafiber.com
VM	Varun Mehra Co-founder, Head of R & d and Supply Chain	varun@tervanafiber.com
	Holden Merritt Vice President of Sales	holden.merritt@tervanafiber.com

Fit

Tervana's lidding film options include Alox + PE, matching Reindl's ReinClear clear barrier film.

87

Impact

Tervana ships production volume to major US protein producers and grocery retailers under multi-year agreements.

SEALKOR Corporation

Custom flexible packaging and sealing equipment manufacturer worldwide

Booth
W-30750

Makes custom flexible pouches, high-barrier laminations, and industrial heat sealing equipment for critical applications.

SEALKOR's high-barrier pouch and lamination production is the relevant application for discussing metallized and clear barrier film requirements.

Open with Which barrier film substrates do you currently specify for your high-barrier pouches and laminations?

Who to look for¹

Fit

SEALKOR's high-barrier flexible packaging and moisture barrier bags align with Reindl's metallized and clear barrier film offerings.

87

Impact

SEALKOR operates two production facilities and serves medical, electronics, and food markets, indicating meaningful scale for a film supplier.

Envaltec

Bag-in-box and flexible packaging manufacturer

Booth
W-49182

Makes bag-in-box bags, liners, and flexible packaging for liquid and bulk applications, including metallized and plain options.

Envaltec's metallized bag-in-box and covers are direct applications for Reindl's metallized films, making it a prospect for film supply. The product range spans small to large formats, indicating potential volume.

Open with What metallized film substrates and barrier properties do you use in your metallized bag-in-box products?

Who to look for¹

Fit

Envaltec produces metallized bag-in-box and covers, which require metallized film, matching Reindl's metallized film offering.

87

Impact

Envaltec's automated production of bags from 0.2 to 300 gallons indicates substantial film consumption, making it a significant potential buyer.

Kestler International Enterprises

Distributor and converter of food and industrial packaging
U.S., Europe

Booth
W-45326

Distributes and converts food packaging films, bags, trays, and industrial films, plus packaging machinery, serving meat, poultry, seafood, dairy, and produce markets.

Kestler's distribution of food and industrial packaging films, including lamination and printing films, aligns with Reindl's metallized BOPET and BOPP films, supporting a channel discussion for broader market coverage.

Open with Which metallized film substrates and barrier properties does Kestler currently distribute or seek for its food and industrial packaging customers?

Who to look for¹

Fit

Kestler distributes food and industrial packaging films, including lamination and printing films, which align with Reindl's metallized film product lines.

82

Impact

With facilities across the U.S., Europe, and Asia, Kestler's distribution network could significantly expand Reindl's market reach for metallized films.

N-5214

Makes vertical form/fill/seal machines, cartoning and case packaging equipment for CPG producers.

Kressbach's VFFS machines process flexible films, so its film specifications can influence demand for Reindl's metallized and barrier films.

Open with What film specifications do you typically recommend for metallized or barrier films on your VFFS lines?

Who to look for¹

	Marguerite Caldwell Vice President of Sales	+16105550134
	Torsten Hoffmann Regional Sales Manager	torsten.hoffmann@kressbach-na.com
	Rosalind Petrakis Mid-West Regional Sales Manager	rosalind.petrakis@kressbach-na.com
	Warrick Sorenson Service Engineer	warrick.sorenson@kressbach-na.com

Fit

Kressbach's VFFS machines process flexible films, aligning with Reindl's metallized and barrier film offerings.

74

Impact

With over 2,000 machines installed in North America, Kressbach's film recommendations can significantly influence film demand.

Falconieri North America

Flexible packaging machinery manufacturer
North America

Booth
S-3426

Makes horizontal flowpack machines, vertical form fill and seal systems, and multihead weighers for food and non-food packaging.

Falconieri's flow wrappers and VFFS machines run flexible films, so its equipment specifications can influence film selection for metallized and barrier packaging applications.

Open with Which film properties are critical for your flow wrappers and VFFS machines when running metallized films?

Who to look for¹

RP	Roderick Pennwell CEO Falconieri USA	roderick.pennwell@falconieri-na.com +15135550178
MW	Marcus Whitlow Director of Sales US	+17705550102
RV	Rutger Vance Sales Manager	+16305550190
VB	Vittorio Bruno Field Service Engineer	+16105550155

Fit

Falconieri designs packaging machinery that processes flexible films, aligning with Reindl's metallized film offerings.

81

Impact

As a North American machinery supplier with broad food and pharma reach, Falconieri can influence film specifications across many packaging lines.

Allerton Paperboard International, LLC

Paperboard and flexible packaging manufacturer
Worldwide

Booth
S-4800

Makes paperboard folding cartons, foodservice cups and trays, and flexible packaging materials including pouches, sachets, and lidding films.

Allerton Paperboard's flexible packaging lines, including pouches, sachets, and lidding films, are the relevant formats for discussing metallized film applications. Its scale suggests substantial potential for film supply.

Open with Which of your flexible packaging products could benefit from metallized film barrier properties?

Who to look for¹

Tamsin Egerton
Global Marketing Director

tamsin.egerton@allertonpaperboard.com
+12145550128

Percival Ashgate
VP Beverage Commercial Operations

percival.ashgate@allertonpaperboard.com
+19205550165

Mikael Ekstrom
Vice President and General Manager

mikael.ekstrom@allertonpaperboard.com

Rutherford Oakes
Vice President, Supply Chain Planning & Customer Care

+18165550158

Fit

Its flexible packaging products, including pouches, sachets, and lidding films, align with metallized film applications for barrier and performance.

67

Impact

With over 100 locations and 23,000 employees, Allerton Paperboard is a large-scale packaging producer, making it a significant potential buyer.

Farleigh Packaging Group

Food, beverage, and specialty packaging manufacturer
North America, Europe

Booth
N-4018

Makes bags, containers, and flexible films for foodservice, food processing, and retail packaging.

Farleigh's barrier film and lidding rollstock production is the relevant application area for discussing Reindl's metallized and clear barrier film supply.

Open with What barrier or metallized film specifications do your hot-fill and lidding applications require?

Who to look for¹

MG	Massimiliano Greco President, International, Industrial and Beverage	massimiliano.greco@koskipack.com +16165550146
WR	Weston Radcliffe President - International/Industrial/Beverage	weston.radcliffe@farleighpkg.com +17045550161
RH	Roscoe Hartwell Vice President of Sales	roscoe.hartwell@farleighpkg.com +15135550161
BS	Bartholomew Sedgwick Director of Sales, Grocery & Retail, Regional Chains (East)	bartholomew.sedgwick@farleighpkg.com +12165550113

Fit

Farleigh's barrier films and lidding rollstock are relevant to Reindl's metallized and clear barrier film products.

67

Impact

With 100+ locations and 20k employees, Farleigh's scale offers significant potential volume for film supply.

SET RIGHT Packaging Systems Inc.

Automated packaging systems integrator
North America

Booth
LU-9010

Designs and installs automated packaging systems including vertical form fill seal, premade pouch, and flow wrapping, plus end-of-line case packing and palletizing.

Their VFFS and pouch systems run flexible films, making SET RIGHT an influencer for film specifications relevant to Reindl's metallized and barrier films.

Open with What film specifications do you typically recommend for your VFFS and pouch systems?

Who to look for¹

WF	Winston Fairbanks Dir. Marketing & Business Dev.	wfairbanks@setrightpackaging.com
IQ	Imran Qureshi Territory Sales Manager	imr@setrightpackaging.com +18165550129
ZP	Zachary Pemberly Territory Sales Manager	z.pemberly@setrightpackaging.com
XB	Xavier Bramwell Automation Engineer Project Management	xavier@setrightpackaging.com

Fit

SET RIGHT designs automated packaging systems that process flexible films, aligning with Reindl's metallized and barrier film product lines.

75

Impact

With North American coverage and systems across food, medical, and other markets, SET RIGHT can influence many film specifications.

Ojas Flexipack LLP

Flexible packaging manufacturer
USA, Europe

Booth
S-5520

Makes customized pouches and laminated rolls for food, pet food, seeds, fertilizers, and pharmaceuticals, including stand-up, side seal, and reusable formats.

Ojas Flexipack's pouch and rollstock production is the relevant application for discussing Reindl's metallized and barrier films, particularly for high-hygiene and barrier packaging needs.

Open with What film substrates and barrier properties do you typically specify for your pouches and laminated rolls?

Who to look for¹

Fit

Ojas Flexipack's pouch and laminated roll production aligns with Reindl's flexible packaging film offerings, though no specific metallized film input is named.

72

Impact

With 20,000 customers, 28 industries served, and exports to 17 countries, Ojas Flexipack's scale could represent significant film volume if a fit is established.
